

40. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?

Earlier navigational aids, particularly those available and affordable to ordinary folks, were just that: aids. They were designed to give travelers a greater awareness of the world around them—to sharpen their sense of direction, provide them with advance warning of danger, highlight nearby landmarks and other points of orientation, and in general help them situate themselves in both familiar and alien settings. Satellite navigation systems can do all those things, and more, but they're not designed to deepen our involvement with our surroundings. They're designed to relieve us of the need for such involvement. By taking control of the mechanics of navigation and reducing our own role to following routine commands, the systems, whether running through a dashboard, a smartphone, or a dedicated GPS receiver, end up isolating us from the environment. As a team of Cornell University researchers put it in a 2008 paper, "With the GPS you no longer need to know where you are and where your destination is, attend to physical landmarks along the way, or get assistance from other people in the car and outside of it."

* dashboard: (운전석 앞의) 계기판

Compared to earlier navigational aids that enabled users to be more ____ (A) ____ with their surroundings, satellite navigation systems ____ (B) ____ us from the environment by limiting our part to simply following directions.

(A)

(B)

- | | | |
|-----------------|-------|-------------|
| ① connected | | detach |
| ② disassociated | | distinguish |
| ③ connected | | protect |
| ④ disassociated | | separate |
| ⑤ concerned | | rescue |

Meanwhile, improving by 1 percent isn't particularly notable, but it can be far more meaningful in the long run.

It is so easy to overestimate the importance of one defining moment and underestimate the value of making small improvements on a daily basis. Too often, we convince ourselves that massive success requires massive action. (①) Whether it is losing weight, winning a championship, or achieving any other goal, we put pressure on ourselves to make some earthshaking improvement that everyone will talk about. (②) The difference this tiny improvement can make over time is surprising. (③) Here's how the math works out: if you can get 1 percent better each day for one year, you'll end up thirty-seven times better by the time you're done. (④) Conversely, if you get 1 percent worse each day for one year, you'll decline nearly down to zero. (⑤) What starts as a small win or a minor failure adds up to something much more.

34. It is important to distinguish between being legally allowed to do something, and actually being able to go and do it. A law could be passed allowing everyone, if they so wish, to run a mile in two minutes. That would not, however, increase their *effective* freedom, because, although allowed to do so, they are physically incapable of it. Having a minimum of restrictions and a maximum of possibilities is fine. But in the real world most people will never have the opportunity either to become all that they are allowed to become, or to need to be restrained from doing everything that is possible for them to do. Their effective freedom depends on actually _____ . [3점]

* restriction: 제약 ** restrain: 저지하다

- ① respecting others' rights to freedom
- ② protecting and providing for the needy
- ③ learning what socially acceptable behaviors are
- ④ determining how much they can expect from others
- ⑤ having the means and ability to do what they choose
